^A Without vent hole

^B With vent hole; use existing OEM vent and hardware or use National Cycle's 23050 Replacement Vent

^C Includes National Cycle's 23050 Replacement Vent and exclusive RainZip® pre-treatment

- ¹ Centerline measurement from top of fairing edge to top of screen
- ² Centerline measurement from bottom center mount hole to top of screen
- ³ Centerline measurement from top of screen to bottom edge of screen
- ⁴ Measured from top of stock headlight shroud to top of windscreen

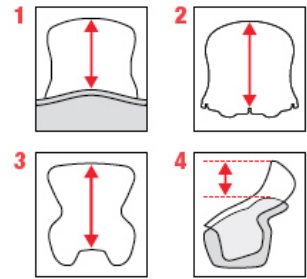

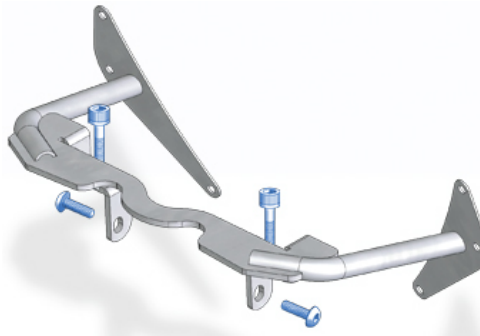

All widths are measured in a straight horizontal line across the back of the screens at their widest point.

† **VStream+ Windscreens** include custom-made, highly engineered and super-strong mounting hardware to accommodate bikes that have no provision for bolt-on windscreens.

VStream+ Mount Kits are included for some models to provide sufficient strength and rigidity to mount taller, touring-sized windscreens.

All VStream+ hardware is designed specifically for each model bike and is finished to match the bike's OEM finish.

VStream+ Mount Kits are included with the windshield.

The typical airflow pattern of the wake from most windscreens is called a *van Karman vortex*. At speeds of 50-90 mph, the air swirls off the windscreen in an approximate 90-degree segment of rotation, hits the bottom of the rider's neck on the way up, and curves off the shoulder at approximately 45 degrees.

We gave the VStream® its name for the shape it takes at the upper edge. The patented "V" shape is so quiet because it pushes this vortex out and away from the side of the rider's head. The rider's helmet then resides in still air, and the passenger's environment is greatly improved as well.

Reduced wind noise... less turbulence... superior strength... perfect style. The VStream revolution is here!
